

COTSWORKS' AD-DSL Supplier Declaration

Created and maintained by the International Aerospace Environmental Group (IAEG), the [Aerospace and Defence Declarable Substance List \(AD-DSL\)](#) is a list of approximately 1,200 chemical substances that are commonly used in the manufacture, repair, and ongoing maintenance of aerospace and defense products which are controlled under a variety of regulations impacting the industry.

COTSWORKS is a supplier of products used by the aerospace and defense industries and some of our products may contain leaded solder and trace amounts of minerals from this list (see table below for substances that could be in our products). **NO** radioactive substances or biocides are present in any of our products.

| Substance Name | Substance CAS | Typical Use |
|----------------|---------------|---------------------------------------|
| Lead | 7439-92-1 | Solder and electrical contacts |
| Beryllium | 7440-41-7 | Metallic plating and clips |
| Cadmium | 7440-43-9 | Metallic plating |
| Gold | 7440-57-5 | Electrical contact plating |
| Tin | 7440-31-5 | Low resistance electrical plating |
| Tantalum | 7440-25-7 | Capacitor anode component |
| Tungsten | 7440-33-7 | Interconnects for integrated circuits |

Please contact our Quality Management team if you have any questions or concerns regarding these substances at quality@cotsworks.com.
